## Wheeled Walker Push Down

Unique push down  
braking mechanism

Height adjustable handles  
(810-945 mm)

Lightweight alloy frame with  
tube-in-tube construction  
for increased strength

Compact fold down design

153 mm (6 inch) castors

Softgrip handles for greater comfort

Foam backrest

Moulded seamless seat with  
concealed PVC seat pouch

Removable  
basket and bag

Designed for general indoor use, the Push Down Wheeled Walker incorporates a unique brake activation system making it ideal for physically or cognitively impaired users.

The alloy frame makes this wheeled walker especially lightweight, while the tube-in-tube construction significantly increases stability and durability. Six inch castors ensure easy operation and manoeuvrability on interior surfaces and through doorways.

The unique push-down brake mechanism makes the product especially easy to operate for people with physical or cognitive difficulties. Brakes are automatically activated by downward pressure on the handles or by sitting on the seat. Handle height can be adjusted easily to best suit the user, with an extension range of 135 mm to suit users of average weight and height.

The fully moulded PU seat is completely seamless, reducing the potential for skin tear or abrasion, plus foam backrest for added comfort when seated.

## Wheeled Walker Push Down

Cleverly concealed beneath the seat is a PVC pouch, offering additional security for small personal valuables.

With the added convenience of both basket and bag that can be used together (basket fits inside the bag to conceal contents) or individually. Both items are removable, for the security and transport of goods when leaving the wheeled walker unattended.

Easy closing mechanism and compact fold down design for convenient transport or storage.
